Software Requirements Gathering Questionnaire

This questionnaire is designed to gather detailed software requirements from stakeholders. As a senior QA engineer, your insights will help ensure that the software meets both functional and non-functional expectations. Please answer the questions carefully and provide specific details where applicable.

- 1. What is the primary purpose or business goal of the software system?
- 2. Who are the main end-users of this software, and what are their primary needs?
- 3. What key features or functionalities must the software include to achieve its purpose?
- 4. Are there any existing systems or tools this software should integrate with?
- 5. What critical workflows or processes should the software support?
- 6. What data inputs and outputs are expected from the system?
- 7. Are there specific performance expectations (e.g., response time, scalability)?
- 8. What security and compliance requirements must the software adhere to?
- 9. What testing and quality assurance standards do you expect to be applied?
- 10. How should the system handle error reporting, logging, and recovery?
- 11. Are there any usability or accessibility requirements for the software?
- 12. What is the expected timeline for delivery, including milestones?
- 13. Are there budget constraints or resource limitations to consider?
- 14. What risks or challenges do you anticipate in implementing this software?
- 15. How will success be measured once the software is deployed?
